PROGRAM SERVICES

The Caribbean Conservation Corporation (CCC) is the oldest sea turtle research and conservation organization in the world. The group was founded in Florida as a nonprofit group in 1959 by Dr. Archie Carr, a renowned University of Florida ecology professor and natural history writer. CCC's mission from the beginning has been to study and protect the world's sea turtles, with a special emphasis on the Wider Caribbean and Southeast U.S. CCC has five major programs, which are conducted in Costa Rica, Panama, Florida and the Wider Caribbean.

Florida Sea Turtle Policy and Education Program

Under the leadership of CCC Policy Coordinator Gary Appelson, we successfully passed two very important pieces of legislation in Florida that improve coastal management policies affecting sea turtle nesting beaches in this state. The first bill was written and lobbied through the Florida legislature by CCC (we received technical advice from the University of Florida College of Law as the bill was being drafted). We titled the legislation the Coastal Hazard Notification Bill, and it received strong bi-partisan support before passing in May 2007. The new law places important requirements on the sale of any beachfront property in the State of Florida. Before closing on the sale of such a property, the seller now is required to disclose critical information about the rates of coastal erosion affecting the property. Additionally, the buyer must be informed if sea turtle nesting occurs on the adjacent beach and, if so, that the presence of these federally protected species will limit the options available for protecting the property from erosion using sea walls and other engineering tactics. In essence, this bill closes a loophole that allowed coastal property owners to sell erosion-prone properties without disclosing the threat to buyers. The buyers of beachfront property now can no longer claim ignorance as they are confronted with future erosion problems and begin demanding permission to build sea walls to battle erosion they say they never knew to expect.

CCC was appointed last year to serve on the Governor's Coastal Hazard Committee. With our strong influence, the Committee developed a number of policy recommendations that were presented to the legislature in a large bill during 2007. The bill was passed with several important components authored and/or supported by CCC. For example, CCC successfully worked with state coastal resource managers to insert language that establishes needed restrictions on the ability of coastal counties to authorize sea wall construction during storm emergencies. The counties still have this authority; however, if they fail to follow strict state guidelines on the use of beach armoring (as several counties have done recently), the Florida Department of Environmental Protection (DEP) now has the ability to revoke a county's "emergency armoring" authority. A second important component of this bill places tough restrictions on the use of an untested new coastal armoring device. Giant sand-filled bags (or geo-tubes) buried just under the surface of coastal dunes have emerged as a cheap alternative to more traditional sea walls. CCC's efforts led to new regulatory restrictions that will severely limit the use of geo-tubes in the future. This was a major success for sea turtles and coastal management.

CCC and a coalition of coastal and ocean NGOs held a press conference in early 2007 on the steps of the Florida Capitol to unveil a "Blueprint for Florida's Coastal and Ocean Future." The document summarizes major problems confronting Florida's marine resources and calls for specific policy changes to ensure a better future for the state's coastline and ocean environment. CCC played a central role in developing the recommendations for improving coastal habitat protection. Gary Appelson represented CCC at the press conference and followed up with a statewide tour with several coalition members speaking to the press and legislators. This initiative is one component in CCC's long-range plan to reform Florida's coastal management policies, and we are very pleased so far with the level of statewide attention to the campaign.

There is real opportunity on the horizon for continued coastal policy reform. Global warming, sea level rise, and increased hurricane activity pose real threats to our coastline, and the media, the public and politicians are increasingly acknowledging these threats. Awareness is increasing around the state that changes are needed to protect our coastal resources. The 2007 elections present many new opportunities, and CCC has already begun to address key issues with gubernatorial candidates and their staff. The "Blueprint for Florida's Coastal and Ocean Future" will be used over the

course of the coming year to guide public debate and discussion on coastal policy. Already, the two primary candidates for governor have responded favorably to the Blueprint and are addressing coastal issues in their campaigns.

In short, CCC is making substantial progress on many fronts to enhance protections for sea turtles and the beach and dune environment. During the coming year, we will continue monitoring and engaging in key issues affecting Florida's coastline. We will build on our recent successes and use our strengthening clout with legislators, the media and regulatory agency staff to achieve meaningful coastal policy reform.

International Sea Turtle Policy Initiative

CCC launched a major new initiative on International Policy, with a focus on reducing the accidental capture of sea turtles in fisheries and promoting international accords for conservation. This program is being spearheaded by Marydele Donnelly, CCC's new International Policy Director, who brings to the organization a wealth of knowledge and respect in the world of international conservation. Addressing the complex issue of reducing the unintentional capture of sea turtles in fisheries, known as bycatch, requires that CCC work on many levels, with governments, regional fishery management organizations, fishermen and conservationists. This work will be carried out under Marydele's experienced leadership from a new CCC field office established just outside of Washington DC.

Each year hundreds of thousands of adult and immature sea turtles are accidentally captured in fisheries ranging from highly mechanized operations to small-scale fishermen around the world. Global estimates of annual capture, injury and mortality are staggering—150,000 turtles of all species killed in shrimp trawls, more than 200,000 loggerheads and 50,000 leatherbacks captured, injured or killed by longlines, and large numbers of all species drowned in gill nets. A major impetus for CCC's new work on fisheries is the dramatic and unexpected decline of nesting loggerhead populations in Florida since 1998. This situation is baffling because loggerheads have been protected under the Endangered Species Act since 1978, millions of hatchlings have reached the sea in the last several decades, and large numbers of small turtles are regularly observed in developmental habitats. So why aren't larger animals surviving to reproduce? Longline fisheries, especially in the Eastern Atlantic but also in more northern waters, have been identified as the probable major culprit in this decline. This situation highlights the need to address sea turtle conservation throughout the Atlantic Ocean basin, which is one of the goals of CCC's new program. Our challenge is to ensure that fishermen develop new methodology and gear to reduce bycatch because they understand that bycatch reduction does not prevent them from making a living. By modifying gear and techniques to protect endangered sea turtles and other non-target species, fishermen can improve their efficiency and help to safeguard marine ecosystems.

Our international work and outreach programs position CCC well to contribute to reducing sea turtle capture in fisheries. This work will include advocacy for policies and regulations that reduce sea turtle capture in U.S. waters and support for hands-on gear research overseas to reduce turtle capture, injury and mortality. As U.S. fishermen develop methodology and gear to reduce sea turtle interactions, we will promote the export of these fixes as appropriate.

Chiriquí Beach, Panama - Sea Turtle Research and Conservation Program

Initiated by CCC in 2003, the Chiriquí Beach, Panama, Sea Turtle Research and Conservation Program already is a glowing success. In June 2006, the project took another huge step forward with the signing of a landmark "tripartite" agreement between the Government of Panama, the local Ngöbe-Buglé indigenous community and the CCC. Meanwhile, the research component of the project continues to uncover exciting information about poorly understood, yet globally significant, nesting populations of leatherback and hawksbill turtles, both considered critically endangered. The project also is a shining example of collaboration between local and international conservation groups, U.S. and Panamanian government agencies, and local indigenous communities.

CCC, through the project's field coordinator, Cristina Ordoñez, will coordinate all activities with the Ngöbe-Buglés and ANAM, while also providing training and jobs for local community members interested in working on the project. With over a dozen full-time turtle surveyors, boat captains and cooks, this project already is a primary source of employment and training in the region. In addition to turtle research and recovery, part of the project's mission is to help the community to replace revenue derived from non-sustainable turtle consumption with sustainable eco-tourism that capitalizes on the robust local turtle populations and the incredible diversity of remote tropical wilderness around Chiriquí Beach.

The project's early nesting studies have found this beach to host one of the top four nesting aggregations of leatherbacks remaining in the world. By working closely with the community and government officials to protect the nesting beach and reduce the harvest of hawksbills in the region, this project stands a real chance of recovering this greatly imperiled species, while also protecting the robust leatherback colony.

Satellite Telemetry Research

For about ten years, CCC increasingly has utilized the technology of satellite telemetry to track the migratory movements of adult sea turtles after they leave their nesting beaches. Because marine turtles spend over 90% of their lives at sea, this technology is one of the few mechanisms available for studying sea turtle behavior and migratory trends. CCC has tracked dozens of sea turtles since we began the practice, but with each new transmitter deployment, we learn something new about a particular population or species of sea turtle. In particular, we are discovering important information about key migration routes and important foraging habitats, which can be used to direct ocean conservation efforts where they are needed most.

During the past year, we have expanded our telemetry work to include several new nesting sites. In particular, through a unique partnership with the Nevis Turtle Group, CCC began an inaugural study to track the migration patterns of "critically endangered" hawksbill sea turtles (*Eretmochelys imbricata*) nesting along the Caribbean coast of Nevis in the West Indies. The study will reveal important information about the turtle's migratory behavior, which will help both conservationists and natural resource managers to improve protection efforts for this endangered species. In 2007, CCC also deployed additional transmitters on Panama leatherbacks, as well as two hawksbills.

Data is already streaming in with information about all of the turtles currently being tracked. CCC's Internet-based *Sea Turtle Migration-Tracking Education Program* allows anyone with Internet access to follow the movements of any of these turtles. The on-line program teaches people about sea turtles and the threats to their survival by allowing them to "watch" sea turtles as they migrate from the nesting beach to feeding grounds located hundreds or even thousands of miles away.

Tortuguero, Costa Rica - Sea Turtle Research and Conservation Program

CCC is well known for its sea turtle monitoring and protection program at Tortuguero, Costa Rica. Begun in the mid-1950s, this program is now the longest-running conservation program of its kind in the world. Every year between April and October, CCC researchers and volunteers conduct nesting and population monitoring studies at Tortuguero Beach, nesting site for the largest remaining colony of green turtles in the Western Hemisphere. The research takes place out of CCC's biological field station, where hired researchers and volunteer participants gather each year to monitor and protect the nesting colony.

2007 marked the 53rd year of monitoring green turtles and the 13th year of monitoring leatherback turtles. Leatherback monitoring occurs from March to May while green turtle monitoring is conducted from June to December. To assist a full-time research coordinator, CCC recruits about 20 research assistants from around the world, with an emphasis on those from Central and South America. These research assistants are provided with room and board at the field station. A long-time resident of Tortuguero is employed as a "track surveyor," walking miles of Tortuguero's beaches early each morning during nesting season to determine how many turtles come ashore each night.

Two years ago in Tortuguero, endangered green turtles returned to nest in the greatest numbers we have seen in 50 years of monitoring. During the height of the last nesting season, we recorded over 3,000 nests deposited in a single night! When nesting finally dwindled to a halt, a record number of nests were documented at this globally important nesting beach. The total number of nests topped 140,000 last year. Nesting this year is still underway, but we expect another banner year for green turtles, indicating that CCC's conservation strategies are working.

The Tortuguero program is the longest-continuous sea turtle protection effort in the world. In fact, it is a model for many projects now taking place around the globe, including CCC's new project at Chiriquí Beach in Panama. Even though the Tortuguero project is being emulated around the world, its true impact must be measured in terms of its effectiveness in recovering sea turtles. On this topic, the facts are clear. Since 1970, CCC has documented a 400% increase in the number of green turtles nesting at Tortuguero!

Application for Extension of Time To File an Exempt Organization Return

OMB No 1545-1709

▶ File a separate application for each return.

- If you are filing for an **Automatic 3-Month Extension**, complete only **Part I** and check this box
 - If you are filing for an **Additional (not automatic) 3-Month Extension**, complete only **Part II** (on page 2 of this form).
- Do not complete Part II unless** you have already been granted an automatic 3-month extension on a previously filed Form 8868.

Part I Automatic 3-Month Extension of Time—Only submit original (no copies needed)

Form 990-T corporations requesting an automatic 6-month extension—check this box and complete Part I only

All other corporations (including Form 990-C filers) must use Form 7004 to request an extension of time to file income tax returns. Partnerships, REMICs, and trusts must use Form 8736 to request an extension of time to file Form 1065, 1066, or 1041.

Electronic Filing (e-file). Form 8868 can be filed electronically if you want a 3-month automatic extension of time to file one of the returns noted below (6 months for corporate Form 990-T filers). However, you cannot file it electronically if you want the additional (not automatic) 3-month extension, instead you must submit the fully completed signed page 2 (Part II) of Form 8868. For more details on the electronic filing of this form, visit www.irs.gov/efile.
